

New Features and Scenarios

Introduction to Overhaul

Scenarios no longer end when a trainee succeeds or fails. Now training facilitators are notified of the completion of a scenario, and can trigger a commence overhaul inject.

Improved Scenarios

We've introduced new on-scene vehicles (such as tanker and pumper vehicles) for more realistic scenarios. A thermal camera has also been introduced to all scenarios to allow trainees to accurately pinpoint key areas of heat.

Sharpened Audio Experience

The audio has been enhanced for the user to create a more life-like experience. Now audio of occupants, personnel and suppressants are spatially tracked for better situational awareness training.

Tutorial Changes

The tutorial is now instigated from a laptop on the bench to prevent accidental triggering.

Life-like Residential Scenarios

The introduction of physics based properties allows objects to respond realistically to the suppressant being used by the trainee.

FLAIM Attack

To improve skill training, FLAIM Attack, our skills based game, introduces electrical hazards and incorporates the need for trainees to crouch to help build muscle memory under strenuous conditions.

Boeing 737 Wheel Fire

For non-international airports (without Boeing 777 traffic)

Boeing 737 Brake Fire

For non-international airports (without Boeing 777 traffic)

Garage Fire with Electric Vehicle Exposure

For risk management during EV exposure

Electric Vehicle and Power Wall Size-up

For properties with an EV, solar power, and battery storage

How to Update Your Software

Follow the instructions below:

- 1 Use a PC and connect to WiFi →
- 2 Go to: **flaimsystems.com/login** →
- 3 Download the files and transfer them onto a USB drive. ↓
- 4 Insert the USB into the SCBA. ←
- 5 Open the installer files folder and double click **'FLAIM Installer'** ←
- 6 The system will start the update process.

Hardware-Enabled Features

Upgrade Your FLAIM Trainer Hardware to Leverage:

Capture

FLAIM Trainer is now equipped with our Learning Performance Analytics System, Capture, helping you extract accurate and actionable intelligence to inform training strategy.

Team Training

Benefit from immersive real-life firefighter training scenarios together to improve your team's response. The cloud-based connection offers a scalable solution for cross-department and role-based team training.

System Updates

Access the latest software releases via a Wi-Fi connection to leverage new features and fire training scenarios.

Contact your Account Manager to discuss your options.
